

Lee Wen Bin (Adrian)

Cyber Security Student · ML Intrusion Detection · Penetration Testing

Final-year Cyber Security student at Asia Pacific University. I build machine-learning intrusion detection, test systems for weaknesses, and keep live operations running.

📍 Kuala Lumpur, Malaysia 📅 Age 22 🟡 Open to graduate / junior roles

about

I'm in the final year of a BSc (Hons) in Computer Science (Cyber Security) at Asia Pacific University (APU), after completing a Diploma in Software Engineering there. My final year project is a network intrusion detection system that uses a Random Forest model to detect DoS/DDoS, port scans and brute-force attacks with 99.86% accuracy, and explains each alert with SHAP.

My coursework covers vulnerability assessment and penetration testing, wireless and cloud security, and secure software. I've also done hands-on IT support at three companies, most recently keeping live esports broadcasts and their networks running at CRIT Malaysia. I'm looking for a role in security operations, penetration testing or security engineering.

experience

IT Support Intern (Cyber Security) — Broadcasting

Sep 2025 - Jan 2026

CRIT Esports Malaysia · Sungai Besi, KL

- Set up and ran the technical side of live esports broadcasts: cameras, audio, lighting, streaming software, overlays and graphics.
- Monitored live streams for quality and stability, and fixed connectivity and equipment problems in real time.
- Kept the network secure during online and on-site events.
- Recorded, clipped and edited content, maintained broadcast equipment, and helped write SOPs for technical operations.

IT Support Intern

Jul 2024 - Oct 2024

AI Tech

- Gave on-site and remote support for desktop and laptop hardware and software issues.
- Did device maintenance, including thermal paste replacement and component upgrades.
- Set up and configured new computers and peripherals.
- Documented support cases and kept records of resolved issues.

IT Support (Part-time)

2021 - 2023

Pets Family · Petaling Jaya

- Diagnosed and fixed hardware and software issues on desktops and laptops.
- Improved the network setup for better connectivity and performance.
- Managed the IT equipment inventory and scheduled maintenance.

projects

Final Year Project

Network-Based Intelligent Intrusion Detection System

2025 - 2026

An ML intrusion detection system trained on the CICIDS2017 dataset. It sorts network flows into benign, DoS/DDoS, port scan and brute force, and explains why each flow was flagged.

99.86%

Accuracy

0.995

Macro F1

Models compared

- Built a leak-free pipeline: feature selection fitted on the training split only, and SMOTE applied inside stratified k-fold CV.
- Compared four ways of handling class imbalance (class weights, SMOTE, SMOTE+Tomek, undersampling) and picked the best by macro-F1.
- Added SHAP explanations for each alert, and mapped the top features to known indicators of compromise.
- Tuned the detection threshold and tracked false-positive rate per class, then benchmarked against Decision Tree, Naive Bayes and Logistic Regression.

education

BSc (Hons) Computer Science (Cyber Security)

Asia Pacific University of Technology & Innovation (APU)

Nov 2024 - Present

Relevant modules: Vulnerability Assessment & Penetration Testing, Advanced Cyber Security, Advanced Software Security, Wireless Security, Cloud Security, Implementation of Secure Systems, Cryptography, Network Attack & Defence, Information Security Management.

Diploma in ICT (Software Engineering)

Asia Pacific University of Technology & Innovation (APU)

Sep 2022 - Jun 2024

CGPA 3.43 · Data Structures, Algorithm Analysis, Object-Oriented Programming, Database Systems.

Sijil Pelajaran Malaysia (SPM)

SMK Taman Connaught

2017 - 2021

2 A's · Mathematics, English.
